All investigations have their limitations, which are imposed by the limits of sensitivity and specificity of individual assay procedures as well as the quality of specimen received by the laboratory. Isolated laboratory investigations never confirm the final diagnosis of the disease. They only help in arriving at a diagnosis in conjunction with clinical presentation and other related investigations. These results are for the information of the referring doctor. The laboratory may be contacted whenever required.

 Emp Code : Company : 36

TEST	RESULTS	UNIT	BIOLOGICAL REFERENCE RANGE
------	---------	------	----------------------------

HIV SPOT

HIV 1 : NEGATIVE
 HIV 2 : NEGATIVE

1. Positive test for HIV antibody should be reconfirmed by testing another sample from the same patient collected after an interval of few days
 2. Performing test using HIV test kit from another manufacturer should further reconfirm positive test reconfirmed after testing the second sample
 3. Performing a Western-blot analysis is needed for final confirmation.
 4. In general the Sensitivity and specificity of all HIV screening test kits range between 97% to 99% therefore an occasional false positive and false negative result can occur.
 5. False negative result occur with long-term immune suppressive therapy B-cell dysfunction etc.
 6. False positive results occur due to antibodies against smooth Muscle, nuclear or leucocytes and T-cell antigen. False positive results occur with severe alcoholic liver disease. Primary biliary cirrhosis etc.
 7. A negative test does not exclude the possibility of prior exposure. Especially a recent one. (Window period)
 8. Final diagnosis of HIV infection must be based on based on clinical correlation with laboratory test result
- Kindly do not accept positive/reactive result if not accompanied by rechecked report by another method with both the report bearing the rubber stamp of the lab

CORONARY ANGIOGRAPHY REPORT

CID. No : 2939

DATE : 14/6/2022

NAME : PRAKASH RAMTEKE

AGE : 68 YEARS

SEX : Male

I.P.D. No. :2206069

Dr.: Dr. Jigar Patel/ Dr. Pranav Oza/ Dr. Devang Desai

ROUTE	CAG done via right radial route.
LMCA	Normal
LAD	Type III vessel shows mild ostial plaque followed long proximal lesion with maximum stenosis of 80% involving D1. other diagonals are small sized vessel.
RAMUS	-
LCx	Co dominant & essentially normal vessel. OM1 is fair sized 30% ostial & mid segment plaque. Distal branch of major OM shows 40% ostial plaque. Other Marginals are normal.
RCA	Co Dominant & shows 70% eccentric proximal plaque (best seen in RAO view) followed by 80% lesion at the level of RV branch. Distal RCA after RV branch is less than 2mm vessel.
RENAL ANGIO	-
OTHER	-

CONCLUSION: UA, TMT Positive, TVD, Significant LAD & RCA Stenosis.

ADVICE: PCI to LAD & RCA
