### INTERPRETATION AND DECISION LEVELS

- 1) Do Not Use Age Or Sex Specific Cholesterol Value As Decision Levels.
- 2) Before Starting Therapy Base **Ldl Levels by Direct Measurements** Should Be Done As The Treatment Goals Are Monitored By Measuring Ldl.
- 3) Average Of 2 To 3 Lipid Profiles Done 1 To 8 Weeks Apart Before Starting Therapy.
- 4) Ranges Give Are The Desirable Levels I.e 75th Percentile Value.
- 5) Always Rule Out Secondary And Familial Hyper Lipidaemias.
- 6) Apo A -1 And Apo B Levels Are Better Discreminaters Of CHD Then Cholesterol Level.
- 7) Low Plasma Apo A-1 And Apo A -1 To B Ratio Is The Best Predictyor.
- 8) Low Plasma **B-12 And Folate Levels** Are Each Independent Risk Factors For CAD.
- 9) Higher Atherogenic Index Is A Risk Factor.
- 10)Hyperhomocysteinemia Increases The Risk.

## **THYROID FUNCTION TEST**

<b>Test</b>	<b>Result</b>	<b>Unit</b>	<b>Ref. Range</b>
<b>TSH (Thyroid Stimulating Hormone)</b>	2.74	uIU/mL	0.3 - 5.0 uIU/mL

### **THYROID FUNCTION TESTS BY ELECTROCHEMILUMINESCENCE (ECLIA) ON ELECSYS 2010.**

T3 And T4 Are The Hormones Synthesised & Secreted By Throid Gland,Plays Important Role In Body's metabolism.TSH Is Synthesised & Secreted By Anterior Pitutary Gland In Response To Thyrotropin Releasing Hormone (trh) Secreted By Hypothalamus.The Secretion Of T3 & T4 Is Regulated By Negative Feedback Mechanism Involving Thyroid Gland,Pitutary gland & Hypothalamus.

In The Circulation 99.7% Of T3 & 99.95% Of T4 Is Reversibly Bound To Transport Proteins Primarily, Thyroxine Binding Globulin (TBG) & Thyroxine Binding Prelalbumin (TBPA),are Metabolically Inactive. Free T3 & Free T4 Are Metabolically Active Hormones Responsible For The Actions Hence Reflects The Thyroid Metabolic Status Better Then Total T3 & T4.

TBG Concentration Remains Relative Constant In Healthy Individuals.however Pregnancy,excess estrogens, androgens,anabolic Steroids & Gluco Corticodis Are Known To Alter TBG Levels & May Cause False Values For Thyroid Function TestS,T3 And T4 Levels May Not Accurately Reflect Thyroid Status.

Primary Malfuction Of The Thyroid Gland May Result In Excessive (hyper) Or Below Normal (hypo) Release of T3 & T4.In Addition TSH Directly Effects Thyroid Function.Malfuction Of The Pitutary Or The Hypothalamus Influences The Thyroid Gland Acitvity.

Disease In Any Portion Of The Thyroid - Pitutary - Hypothalamic System May Influence The Levels Of T3 & T4 In The Blood.The TSH Level Is Important In Evaluating Thyroid Function Especially For The Differential Diagnosis Of Primary (thyoid) From Secondary (pitutary) And Tertiary (hypothalamus) Hypo Thyroidism.

In Primary Hypothyroidism TSH Levels Are Significatly Elevated, While In Secondary & Tertiary Hypothyroidism TSH Levels Are Low.In Addition In The Euthyroid Sick Syndrome Multiple Alterations In Thyroid Function Tests Findings Have Been Recognised In Patiens With A Wide Variely Of Non Thyroidal Illnesses Withouth Evidence Of Pre-existing Thyroid Or Hypothalamic Pitutary Disease.
